Director of Human Resources

Integrated Digital Systems (IDS)

Bir Hasan

Beirut

Dear Sir/Madam:

Re/Ref: Job Application for Entry Level Full-Stack Developer Position

I am applying for the position of Entry Level Full-Stack Developer. The vacancy was advertised on December 10th, 2024, on LinkedIn.com. The position fits very well with my experience and career interests. My goal is to work in a position devoted to programming and building robust applications with a company with diverse clients such as yours. Even though I'm still completing my university education in Computer and Communication Engineering, and I'm expected to graduate in June 2027, I have been working in the programming and development industry thoroughly. My experience as a full-stack developer prepared me well for this role at IDS. I helped build, update, and design programs and websites, including my own projects and my latest project with your company during my internship. My time as an intern at your company gave me experience both with programming, database management and program website design. Prior to my internship with IDS, I worked as a freelancer and completed online courses, where I built full-stack projects and learned multiple concepts. These experiences have prepared me to be able to take on the programming and web development tasks described in the job posting.

I am very detail oriented, can manage my time well, and can comfortably manage multiple tasks at once. I have also taken a work readiness skill course at my university where I have developed skills such as customer service, communication and collaboration.

I will be happy to come for an interview to discuss more my skills and interests.

Kind Regards,

MohammadHasan Kourani
